(a) Kicked Ising chain: lists near the open end
bulk list, the same at every N
one curve per depth for every N
7 layers: flat from qubit 12
10 layers: flat from qubit 18
13 layers: flat from qubit 24
qubit's lists / bulk
qubit, counted from the end of the chain
(b) Longest list and list read
kicked Ising, open chain: longest (c)
both models: the list a scan reads;
2D Hubbard, torus (open markers): also the longest
list length / mean
N
